

# ArmRBlind

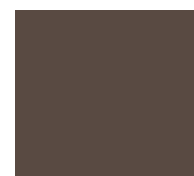

COMMERCIAL | RESIDENTIAL

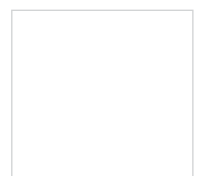

*ArmRBlind offers privacy by sealing manually operable blinds within an insulated, dual pane glass unit.*

The blinds are operated with a manual slide toggle mounted to each glass unit rather than pull cords making these units safer than traditional corded blinds. The ArmRBlind is perfect for homes, hospitals, schools and any other application looking for quick privacy in their glass garage door. This option cannot be retrofitted into existing overhead doors and must be manufactured into a new overhead door. Since 1958, ArmRLite has been consistently manufacturing glass garage doors and has never compromised on the quality of our doors. Because of this, ArmRLite is able to produce replacement sections for any of our welded models, regardless of purchase date.

- Blinds Between Insulated Glass Units
- No Pull Cord or Tilt Wand
- Low-E Available
