

ADA Compliant Pass Door

COMMERCIAL | RESIDENTIAL

ArmRLite's exclusive ADA Compliant Pass Door is unique since it contains no step-over bottom rail.

The ADA Compliant Pass Door is built to the height and width as required by ADA guidelines and local codes. Some requirements include either a solid bottom panel or 10" high "kick plate." ADA Compliant Pass Doors are not available on projects with sloped or uneven floors. The ADA Pass Door comes with standard hardware, however, custom hardware or panic bar upgrades are available. The ADA Pass Door is located in the center of the door assembly and designed to swing out only. The Pass Door can contain solid aluminum panels, 1/8" tempered glass or a lightweight glazing alternative. The overhead door must be motorized with a pass door interlock switch. The ADA Compliant Pass Door is available on our Titan™ or Custom C.I.™ models.

- No Step-Over Bottom Rail
- Standard, Vertical or High Lift
- 5-Year Welded Frame Warranty*

*Except the top section when trolley operated.

**If two or more overhead doors are located next to each other, a minimum column of 12" is required between the doors.
